

WELCOMES YOU TO SUGARING WITH THE *STAINLESS POUR OFF VALVE*

The *Stainless Pour Off Valve* works with the *Sapling Evaporator Pan*, the *Seedling Evaporator Pan*, and the (discontinued) *Two-by-Four Pan*. It is as safe and easy to use as the lead-free brass valve that came with your original pan, it's just . . . shinier!

Installing your *Stainless Pour Off Valve*

To install your *Stainless Pour Off Valve*, remove all parts from inside the shipping container. You will have: one (1) stainless pour off valve and, (2) a smidge of pipe tape.

If you have already installed a pour-off valve on your Vermont Evaporator Company Pan, uninstall it (this may require a wrench) and clean any excess pipe tape off the threaded exit on the pan.

Starting one thread back from the exit, wrap your bit of pipe tape around the exit pipe in a clockwise manner and wind around until completely used. Screw the pour off valve on over the pipe tape.

Before using your *Stainless Pour Off Valve*, put a solution of 1 tablespoon of baking soda dissolved in 1 gallon of warm water in the pan. Test your spigot by opening and closing it, allowing the baking soda solution to pour through. Rinse thoroughly.

Happy Sugaring!
