

## **WELCOMES YOU TO SUGARING WITH THE *SKIMMER***

The *Skimmer* you've just received is handy for skimming that pesky foam or odd piece of wood ash off the top of your maple syrup boil.

It also works well for giving you something to do when you aren't hauling the sap, splitting the wood, stoking the fire, adjusting the air flow in and out of your firebox, tinkering with your sap input, and taking temperature readings.

Wouldn't want you to be idle!
