

WELCOMES YOU TO SUGARING WITH YOUR *Food Grade, 5-Gallon Sap Storage Buckets with Lids*
(Set of 5)

The lidded buckets you've just received are ideal for collecting and storing sap for syrup. The snap-fit lid with pour spout allows you to keep critters out while collecting sap through a drop line, and, along with the handle on the bottom, makes for a convenient, no mess pour into container or evaporator.

When you receive your buckets, the pour spout will be protected by some translucent plastic (much like a can of olive oil.) Break the small tabs to pull out the center of the translucent covering. You will then be able to pull out the pour spout.

These are durable buckets that will last for years. To clean, use a soft cloth and a weak baking soda solution (1 Tablespoon of baking soda dissolved in 1 gallon of water), rinse well, and allow to dry. As with all sugaring equipment, do not use abrasives, detergents, or other chemicals when cleaning.

Enjoy!
